SCT v2.2-I Final Unified Zenodo/GitHub Upload Bundle

Spherical Cyclic Time / Tempo Sferico Ciclico

Purpose. This package unifies v2.2-G and v2.2-H into one final upload-ready bundle. It preserves the v2.1.0/v2.1-H public upload files and adds the v2.2-E timeline-bundle wording addendum, the v2.2-F numerical/formula invariance audit, and the v2.2-H final upload-facing clarification patch.

1. Release decision

Check	Result
Package role	Unified upload bundle
v2.1-H public files	Preserved
v2.2-E	Included
v2.2-F	Included
v2.2-H	Integrated
New numerical execution	No
Formula/derivation changed	No
Transfer-kernel result changed	No
Observational claim	No
Claim boundary	Preserved

2. What is new relative to v2.1.0

The update is a wording clarification plus a numerical/formula invariance audit. It adds public-facing language that declassifies the spherical/circular construction as a nonphysical auxiliary timeline-bundle visualization. It also adds an audit confirming that the v2.1.0 formulas, tables, scripts, and transfer-kernel conclusions are unchanged.

3. What does not change

- No new numerical result.
- No formula or derivation changed.
- No transfer-kernel result changed.
- No observational claim.
- No physical geometry of the universe is claimed.
- No claim that all modeled temporal lines physically exist.

4. Final public wording lock

The common graphical marker is a Big-Bang boundary-condition marker for the timeline-bundle visualization, not a spatial center. The lines/layers are not material shells, not an expansion front, and not a literal physical geometry. The notation B(sigma) = {L_i(sigma)} is descriptive only and is not used as a new dynamical equation or computational input.

5. Known QA-only note

The preserved v2.1-H full package contains a documented manifest mismatch limited to qa/final_zip_test.txt. This is inherited from the already-published archival package. It does not affect formulas, scripts, tables, numerical outputs, or scientific results. This note is made visible for upload and documented in v2.2-F/v2.2-H.

6. Recommended Zenodo/GitHub use

Upload the files in upload_files/ in numeric order. Use copy_paste_blocks_final/ZENODO_DESCRIPTION_FINAL_v2_2_I.md as the visible description/update note. Optionally also upload the outer final v2.2-I ZIP and its sidecar hash as the complete upload bundle.

7. Upload file families

Range	Contents
00	v2.2-I overview PDF and sidecar
01-07	Preserved v2.1-H public upload files
08-09	v2.2-E PDF/ZIP and sidecars
10-11	v2.2-F PDF/ZIP and sidecars
12-13	v2.2-H PDF/ZIP and sidecars

8. Decision record

SCT_V2_2_I_FINAL_UNIFIED_ZENODO_GITHUB_UPLOAD_BUNDLE_DONE; V2_2_G_AND_V2_2_H_UNIFIED; V2_1_H_PUBLIC_UPLOAD_FILES_PRESERVED; V2_2_E_TIMELINE_BUNDLE_MINI_RELEASE_INCLUDED; V2_2_F_NUMERICAL_FORMULA_INVARIANCE_AUDIT_INCLUDED; V2_2_H_UPLOAD_CLARIFICATION_PATCH_INTEGRATED; QA_ONLY_V2_1_H_NOTE_UPLOAD_VISIBLE; B_SIGMA_DESCRIPTIVE_ONLY_LOCKED; NO_NEW_NUMERICAL_EXECUTION; NO_FORMULA_OR_DERIVATION_CHANGED; NO_TRANSFER_KERNEL_RESULT_CHANGED; NO_OBSERVATIONAL_CLAIM; CLAIM_BOUNDARY_PRESERVED.

9. Output integrity

The final package includes SHA256 sidecars, a manifest, ZIP test output, upload sidecar verification, and PDF render QA. Input hashes are recorded in metadata/INPUT_HASHES_v2_2_I.json.
